PAVAN H

Software Engineer | Java | Spring Boot | Microservices | REST APIs | Kafka | Redis | MySQL | AWS | Docker

officialpavanh@gmail.com | +91 9945270658 | linkedin.com/in/pavan-h-808a1a19b | Bengaluru, India

PROFESSIONAL SUMMARY

Immediate Joiner | Java Backend Developer with 3.8 years of experience building enterprise backend systems across e-commerce and banking domains using Java 8+, Spring Boot, Spring MVC, and Hibernate/JPA. Developed microservices and RESTful APIs for Samsung's e-commerce catalog platform at TapQwik, managing product data, categories, and search, backed by MySQL and optimized JPA queries. Applied Redis caching to cut DB load, and integrated Apache Kafka for event-driven catalog sync across search and pricing services, reducing update propagation time by ~25%. Currently on TCS BaNCS core banking modules, developing account and transaction processing workflows, writing SQL for reconciliation and batch reporting, improving data-processing efficiency by ~25%. Skilled in Swagger/OpenAPI, Postman, JUnit/Mockito testing, and production troubleshooting with root cause analysis. Experienced with Docker, Jenkins CI/CD, and AWS EC2, S3, RDS. Strong in layered MVC architecture and query optimization.

IT SKILLS

Backend Development: Core Java, Java 8+, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, JPA, RESTful Web Services

Microservices & Architecture: Microservices, REST API Design, Layered Architecture, MVC, SOLID Principles, Design Patterns, Service Integration

Database & Data Processing: MySQL, SQL, JDBC, Database Indexing, Query Optimization

Messaging & Event Processing: Apache Kafka, Kafka Producers/Consumers, Event-Driven Architecture, Asynchronous Processing, Inter-Service Communication

Cloud & DevOps: AWS EC2, AWS S3, AWS RDS, Docker, Jenkins, CI/CD Pipelines, Linux

API & Integration: REST API Integration, Swagger, OpenAPI, Postman, JSON, XML, Third-Party API Integration

Testing & Quality: JUnit, Mockito, Integration Testing, Unit Testing, SonarQube, Code Reviews

Banking & Enterprise: TCS BaNCS, Account Processing, Transaction Processing, Reconciliation, Financial Data Processing, Batch Operations, Production Support

Development Practices: Agile/Scrum, Sprint Planning, Root Cause Analysis, Performance Tuning, Log4j, Logback, Production Troubleshooting

Tools: Git, GitHub, Maven, IntelliJ IDEA, Eclipse, JIRA, Confluence

PROFESSIONAL EXPERIENCE

Product Engineer | Tata Consultancy Services (TCS BaNCS) *May 2024 – Present*

- Develop and maintain legacy Java modules on TCS BaNCS core banking platform handling account management and transaction processing workflows.
- Analyze business requirements and implement backend enhancements for banking product features within regulated compliance frameworks.
- Write and optimize SQL queries for financial reporting, account reconciliation, and batch processing operations on banking databases.
- Participate in code reviews, unit testing, and defect resolution cycles following TCS delivery methodology and quality gates.
- Collaborate with business analysts and functional teams on requirement clarification, impact analysis, and UAT support activities.
- Document technical specifications, change logs, and deployment procedures for banking module releases.
- Collaborated with QA and frontend teams on API integration, defect triage, and release readiness validation.

- Participated in code reviews, sprint demos, and technical discussions to improve backend quality and delivery predictability.

Software Engineer | TapQwik Software Private Limited *Jan 2023 – May 2024*

- Developed Java Spring Boot microservices for Samsung E-Commerce Catalog platform managing product data, categories, and media asset associations.
- Built REST APIs for catalog search, product detail retrieval, and bulk product import with MySQL backend and Redis caching.
- Integrated Kafka event streams for catalog update propagation to search indexing and pricing microservices.
- Implemented validation logic, error handling, and API documentation for catalog service consumer teams.
- Contributed to Docker containerization and Jenkins CI/CD setup for automated AWS deployment workflows.
- Supported production troubleshooting for catalog sync issues, API performance bottlenecks, and data quality discrepancies.
- Collaborated with QA and frontend teams on API integration, defect triage, and release readiness validation.
- Participated in code reviews, sprint demos, and technical discussions to improve backend quality and delivery predictability.

ROLES AND RESPONSIBILITIES

- Implemented MVC architecture using Java, Spring Boot, and Hibernate, delivering scalable and maintainable e-commerce and retail backend platforms.
- Built multi-layered backend with Controller, Service, and Repository layers ensuring separation of concerns and code maintainability.
- Developed RESTful APIs integrating MySQL, Redis, and microservice endpoints for efficient data flow and reliable communication.
- Designed and optimized database queries, JPA mappings, and transaction handling for high-volume backend operations.
- Integrated Apache Kafka for asynchronous event processing and decoupled inter-service communication.
- Applied Redis caching for frequently accessed data to reduce database load during peak traffic.
- Authored Swagger/OpenAPI documentation and Postman collections for frontend integration and QA validation.
- Maintained Jenkins CI/CD pipelines and Docker-based deployments for repeatable builds and controlled releases.

KEY PROJECTS

TCS BaNCS Banking Modules

Technologies: *Java, SQL, TCS BaNCS Framework, Legacy Integration*

Banking backend environment supporting account management, transaction processing, reconciliation, reporting, and operational data workflows.

- Enhanced Java modules for account lifecycle and transaction-processing operations.
- Developed SQL queries and scripts for reconciliation, reporting, and batch processing.
- Implemented transaction validations and supported financial data processing workflows.
- Investigated production issues using SQL, logs, and database analysis.
- Participated in UAT, code reviews, defect resolution, and release validation.
- Improved data-processing efficiency by ~25% through SQL optimization.
- Reduced manual reconciliation effort by ~20% through reusable SQL validation routines.

Samsung E-Commerce Catalog System

Technologies: *Java, Spring Boot, Kafka, Redis, MySQL, AWS, Docker*

Backend platform supporting Samsung's digital commerce catalog with capabilities for product onboarding, category management, SKU information, product variants, search, pricing data, and catalog synchronization. The solution used Spring Boot services with event-driven updates and caching to support efficient product-data access.

- Developed REST APIs for product details, categories, variants, search, pagination, and filtering.
- Built catalog ingestion workflows with validation and bulk MySQL updates.
- Integrated Kafka for catalog-change events and downstream search synchronization.
- Applied Redis caching and optimized MySQL/JPA queries for catalog read operations.
- Supported Docker-based deployments and Jenkins CI/CD workflows on AWS.
- Improved catalog API responsiveness by ~30% through caching and query optimization.
- Reduced catalog update propagation time by ~25% using Kafka-based asynchronous processing.

SOFT SKILLS

Production Mindset • Incident Management • Collaboration • Communication • Adaptability • Ownership • Quality Assurance Focus

EDUCATION

B.E. Mechanical Engineering | Jawaharlal Nehru National College of Engineering (JNNCE), Shivamogga | 2023
